

## PROJECT 5:

### Working with S3

#### A) working with S3-jpg

The screenshot shows the AWS S3 Management Console homepage. At the top, there's a banner about AWS Storage Gateway. Below it, the 'S3 buckets' section has a search bar and buttons for '+ create bucket', 'Edit public access settings', 'Empty', and 'Delete'. It displays '0 Buckets' and '0 Regions'. The main content area says 'You do not have any buckets. Here is how to get started with Amazon S3.' It features three cards: 'Create a new bucket' (with an icon of a bucket), 'Upload your data' (with an icon of a bucket and an upload arrow), and 'Set up your permissions' (with an icon of two people and a plus sign). Each card has a 'Learn more' link and a 'Get started' button.

The screenshot shows the 'Create bucket' wizard. Step 1, 'Name and region', is active. It has tabs for 'Configure options', 'Set permissions', and 'Review'. The 'Bucket name' field contains 'jpg1234'. The 'Region' dropdown is set to 'Asia Pacific (Mumbai)'. A note says 'You have no buckets 0 Buckets'. At the bottom are 'Create' and 'Cancel' buttons, and a 'Get started' link.

This bucket is empty. Upload new objects to get started.

Upload an object

Set object properties

Set object permissions

Buckets are globally unique containers for everything that you store in Amazon S3.

After you create a bucket, you can upload your objects (for example, your photo or video files).

By default, the permissions on an object are private, but you can set up access control policies to grant permissions to others.

Block public access Access Control List Object Ownership Bucket Policy CORS configuration

**Block public access (bucket settings)**

Public access is granted to buckets and objects through access control lists (ACLs), bucket policies, access point policies, or all. In order to ensure that public access to all your S3 buckets and objects is blocked, turn on Block all public access. These settings apply only to this bucket and its access points. AWS recommends that you turn on Block all public access, but before applying any of these settings, ensure that your applications will work correctly without public access. If you require some level of public access to your buckets or objects within, you can customize the individual settings below to suit your specific storage use cases. [Learn more](#)

**Block all public access**  
Turning this setting on is the same as turning on all four settings below. Each of the following settings are independent of one another.

**Block public access to buckets and objects granted through new access control lists (ACLs)**  
S3 will block public access permissions applied to newly added buckets or objects, and prevent the creation of new public access ACLs for existing buckets and objects. This setting doesn't change any existing permissions that allow public access to S3 resources using ACLs.

**Block public access to buckets and objects granted through any access control lists (ACLs)**  
S3 will ignore all ACLs that grant public access to buckets and objects.

**Block public access to buckets and objects granted through new public bucket or access point policies**  
S3 will block new bucket and access point policies that grant public access to buckets and objects. This setting doesn't change any existing policies that allow public access to S3 resources.

**Block public and cross-account access to buckets and objects through any public bucket or access point policies**  
S3 will ignore public and cross-account access for buckets or access points with policies that grant public access to buckets and objects.

s3.console.aws.amazon.com/s3/buckets/vrsoncontrol1234/?region=ap-south-1&tab=overview&showversions=true

Amazon S3 > vrsoncontrol1234

This bucket is empty. Upload new objects to get started.

**Upload an object**

Buckets are globally unique containers for everything that you store in Amazon S3.

[Learn more](#)

**Set object properties**

After you create a bucket, you can upload your objects (for example, your photo or video files).

[Learn more](#)

**Set object permissions**

By default, the permissions on an object are private, but you can set up access control policies to grant permissions to others.
